

Dishwashers

Save water and up to 30%
on running costs with every star

Save energy, water
and money

Save water and up to 30% on running costs with every star. Buy a dishwasher with at least 3.5 stars.

Every extra star can reduce running costs by up to 30% a year. The most efficient dishwashers use half the water of average models so you can save on your water bills.

Compare star ratings

Use the rating labels to find the most efficient models — the more stars the better. To compare models with the same star ratings refer to the energy and water consumption numbers on the label.

Buy to save in the long run

- › Buy a dishwasher with at least 3.5 energy stars and 3.5 water stars.
- › Choose a dishwasher with a range of wash options, including half loads and economy wash.

Maximise efficiency

- › Choose the right size dishwasher for your needs.
- › Only use when full.
- › Select the economy option or half load option.
- › Keep the filters clean.

If you have a time-of-use electricity tariff, use the delay start option so that you run the machine during low cost periods.

Running costs

If used efficiently, dishwashers can use less water than washing by hand.

Type	Energy Rating	Annual Cost*
14 place setting	★★	\$132
	★★★★	\$65

Note: Based on using dishwasher seven times per week connected only to the cold water supply. Based on an electricity tariff of 28 cents/kWh.
